MASTER THREAD

PURPOSE & DESIGN PRINCIPLES

Build faster, stronger, more durable football players with a repeatable 4-day schedule that can run every year.

WEEKLY STRUCTURE

Day 1 Hinge + Reactive · Day 2 Bench + Row Strength · Day 3 Front Squat + Single Leg + Posterior · Day 4 Incline + Row Cluster + Mobility. Speed work runs on its own 4-day track (see Speed Development).

POWER FIRST

Jumps and throws are trained fresh, with full resets and high intent — always before the heavy bars.

STRENGTH WITHOUT GRINDERS

Heavy work is capped by percentage or RPE so technique stays clean and recovery stays predictable.

NO MOVEMENT REPEATS IN A WEEK

Jump variations rotate weekly; the split-squat pattern appears once per week (RFESS only).

THROUGHPUT

Sessions are built around a rack-dominant room and fast transitions so 50+ athletes can move through cleanly.

ADAPT AFTER FATIGUE, NOT THROUGH IT

Three true deloads (Weeks 7, 11, 15). Loading blocks never exceed four consecutive weeks.

TEST WHAT WE TRAIN, TRAIN WHAT WE TEST

KPI	PROTOCOL	WHAT IT MEASURES
Vertical Jump	best of 3	Elastic power, rate of force development
Broad Jump	best of 3	Horizontal power, total-body projection
Fly 10	best + avg of best 2	Max-velocity quality with low testing noise
5-10-5	2 per direction	Change of direction — aligns program with team testing history
Bench Press	3RM recommended	Upper-body strength, collision capacity
Front Squat	3RM recommended	Lower-body strength, posture, sprint transfer
Conventional Deadlift	weekly top set + optional 3RM	Posterior-chain strength, hinge power
Mile	start / mid / end of cycle	Engine — assigns conditioning tier

Secondary KPIs: attendance percentage, bodyweight (monthly), and strength-to-bodyweight ratios for context.

TESTING RHYTHM

WHEN	WHAT
Baseline • start of Phase 1	Vertical (3), broad (3), fly 10 (2-3 timed), 5-10-5, bench 3RM, front squat 3RM, mile. Optional: deadlift 3RM.
Trend checks • every 2 weeks	Vertical + fly 10. Add broad jump if time allows. Fast and low-fatigue.
KPI weeks • Weeks 7, 11, 15	Full battery or a "clean heavy set" (3RM / heavy double) depending on equipment and time.
Standardization	Same surface, same warm-up, same timing method, same number of attempts. Record best and the full attempt series.

THE TWO-TRACK SYSTEM

One template, two intensities. Assign each athlete a track at baseline using the testing data; promote at any KPI week. A 12" jumper and a 34" jumper should not do the same depth drop.

FND

FOUNDATION TRACK

- Assignment: vertical < 22" OR front squat < 1.0x bodyweight OR first off-season
- Plyos stay extensive: low box jumps, snap downs, hurdle hops on grass — no depth drops
- Main lifts hold the bottom of every %/RPE range; add reps before load
- Technique standard beats load standard every time

VAR

VARSITY TRACK

- Assignment: vertical ≥ 22" AND front squat ≥ 1.0x bodyweight AND clean landings
- Full plyo menu including depth drops and contrast work as written
- Main lifts work the top of the %/RPE range when bar speed is good
- Promotion is earned at KPI weeks — never mid-block

WHERE THE PROGRAM SAYS...	FND DOES	VAR DOES
Depth Drop → Vertical	Low box jump 3x3	As written
Contrast (heavy → max vertical)	Pause squat → box jump	As written
Tuck Jump / Hurdle Hop	Mini hurdles, grass	As written, full height
RPE 8–8.5 top sets	Cap at RPE 7.5	As written

PULL-UP LADDER & FRONT RACK FIX

PULL-UP LADDER — EVERY ATHLETE HAS A LEVEL

LEVEL	STANDARD	PRESCRIPTION WHEREVER "PULL-UP LADDER" APPEARS
L0	0 pull-ups	Slow eccentrics 4-5s x5 + dead hang 20s
L1	1-3 pull-ups	Band-assisted x5 + 2 strict at the end of each set
L2	4-7 pull-ups	Strict sets of 5 · shorten rest week to week
L3	8-12 pull-ups	Strict 5s · add small load when all sets are clean
L4	13+ pull-ups	Weighted 4-5s · leave 1-2 in the tank

Move up a level when the standard is met at any KPI week. Team testing shows a large group at L0-L1 — that group is the fastest place to add pulling strength on this roster.

FRONT RACK FIX — NOBODY LOSES THE FRONT SQUAT TO WRIST MOBILITY

RACK LEVEL	POSITION	GRADUATE WHEN
R1	Goblet / double-KB front rack	Owens depth + posture at bodyweight-appropriate load
R2	Cross-arm barbell	Bar sits on shoulders, elbows stay up through full ROM
R3	Straps on the bar	Fingertips reach the bar with elbows above parallel
R4	Clean grip	Full position — stay here

Daily micro-dose in every warm-up: 2 min — wrist rocks, banded lat stretch, elbow-punch front-rack hold with empty bar. Small dose, every day, beats a mobility day nobody does.

SPEED DEVELOPMENT · 4-DAY TRACK

Runs alongside the lifting week. Full recoveries on all sprint work — speed is a skill, not conditioning. All distances in yards.

DAY	FOCUS	PHASE 1-2 (WKS 1-6)	PHASE 3 (WKS 8-11)	PHASE 4 (WKS 12-15)
Day 1	Agility / COD	Pattern teaching: 5-10-5 walk-throughs, mirror drill 4x8s	Timed 5-10-5 x4-6 · full rest · compete	Reactive COD + competition periods
Day 2	Acceleration	6-8 x 10yd from 3-point + push-up starts · walk-back rest	5-6 x 15-20yd · full rest	4-5 x 20yd · maintain, don't accumulate
Day 3	Conditioning (tiered)	By mile tier — see conditioning table below. Never the day before a KPI check.		
Day 4	Max Velocity	Build-ups 3-4 x 40yd @ 80-90%	Fly 10s: 2-3 x (20yd build + 10yd fly) · full rest	Fly 10s 3-4 reps · this is the KPI — time them

Warm-up before every speed day: plyo prep + functional mobility (matches the WU1-WU4 intent of the lifting week). Total weekly high-intensity sprint volume stays under ~300yd.

CONDITIONING TIERS · ASSIGNED BY MILE TIME

TIER	MILE	DAY 3 PRESCRIPTION
GREEN	< 8:00	Maintain: 1x/wk tempo 8-10 x 100yd @ 70% · walk 45s
YELLOW	8:00-10:00	Build: tempo 10-12 x 100yd @ 70% + 10 min bike/jog after Day 4
RED	> 10:00	Priority: tempo runs 2x/wk + one 20-min aerobic piece · retest mile every 4 weeks

NECK & TRAPS · NON-NEGOTIABLE

Two exposures per week, ~5 minutes, built into lifting Days 2 and 4: band or partner iso holds (flexion / extension / lateral, 2x10s each) plus heavy DB shrugs 2x10. Cheap insurance for a collision sport.

WU1 → WU4

WU1 • TEACH + GROOVE

Positions, landing quality, hinge and squat patterning, low fatigue. Includes the 2-min front-rack micro-dose.

WU2 • BUILD SPEED

More stiffness and faster contacts; slightly higher intent on jumps and throws.

WU3 • FAST + ELASTIC + SPECIFIC

Full intent on explosive work, longer rest, minimal fatigue.

WU4 • DELOAD / KPI PREP

Fast but low volume; reduce soreness drivers; keep the nervous system sharp.

Cycle: WU1 → WU2 → WU3 → WU4, then repeat. As intensity rises, WU3 appears more often, then WU4 for deload and testing weeks. Block letters (A–F) in the session tables match the on-floor coaching language.

PHASE 1 • FOUNDATION

Build positions, landing mechanics, and base volume while keeping sessions fast and repeatable. Primary loading 60–65% on main lifts, mostly 5-rep sets. Explosive work low volume, high quality.
